DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of embodiment 2, figures 2(b)-2(c), claims 1-9 and 11-12 filed 09/10/2003 is acknowledged.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, applicant should clarify what is intended by "an l-core two U-cores."

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Matsumoto et al. [JP 07-272954].

Matsumoto et al. discloses a transformer [figures 2-3] comprising :

- a bobbin [11] includes a plurality of terminal pins [13];
- a winding structure [15] wound about the bobbin; and
- a core structure coupled to the bobbin and including an I-core and two U-cores.

Regarding claim 2, Matsumoto et al. inherently discloses the winding structure includes primary and secondary windings.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-9 and 11-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsumoto et al. [JP 07-272954] in view of Ito et al. [JP 01-281713].

Matsumoto et al. discloses the instant claimed invention except for the specific core structure.

Ito et al. discloses a transformer [figure 3] comprising :
a core structure including an I-core and a U-core; and
a winding [17].

wherein the I-core having a plurality recessed edges formed on the same surface at the corners of the I-core's terminal and the U-core having a plurality of protrusive edges formed on a terminal of the U-core.

wherein the U-core coupled to the I-core by means of the recessed edges and the protrusive edges.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the core structure recessed/protrusive edge design of Ito et al. in the core structure of Matsumoto et al. for the purpose of providing a compact and thin construction for the transformer.
